Stat 318 Fall 08:

Positive comments:

- Liked lectures and quizzes/exams were a good and fair challenge. Presented clear and concise lectures. Awesome job.
- I liked how well it taught me to problem solve. Availability for extra help was great. Andreas is very fair yet very instructional. Andreas takes a great deal of time for his students. Above and Beyond he really wants to prepare them and help them learn. I will probably get a C in this class but it is a proud grade for me, and not because of his lack of teaching or extra help.
- Instructor was the best part of this course
- This instructor was more willing to help his students than any other instructor/professor I have seen at Penn State.
- Teacher very eager to help students. Always available to answers via email or at office hours
- I liked the atmosphere that the instructor helped create in class. I liked his attitude, especially his desire for us to learn
- Andreas does a very good job of explaining things until we all understand it.
- It made me think using skills I had never used before. Excellent instruction of material, always there for students when he needed him
- The instructor was very good and helped make the class enjoyable. He is very engaging and wants you to do well, but still makes you work for it.
- I liked how he related the material to us in a way we could understand.
- It was very structured and organized. I liked that he cared about his students, he was willing to help, and his weeks were very well structured.
- Andreas is a great instructor. He seems to have a real care about Statistics and wants to make sure that each student knows the material
- He is very kind and energetic and he explains things very well.
- Great style. Fair grading. Keeps things interesting with a good pace but still covers all the information thoroughly. **Clone this teacher and use him for every section.**
- He kept the class entertaining.
- The instructor made the class a lot of fun to attend and was very helpful by sending out emails and creating help boards.
- The instructor is great. He always encourage students to ask questions and would like us to discover some interesting fact to relate the course to real life.

Room for improvement:

- I did not like the disparity between problems in the book and problems on the Quizzes and exams
- Exams are a little too abstract. Maybe worth less or have better real world applications.
- I don’t like how the examples in class are easy, but the homework and quizzes are hard
- Explain what Gamma functions are and why we use them.
- Pick up the pace a little.
